President's Message

Happy Spring, XWARN!

April showers bring may flowers! But have you heard about Super El Niño? Climate models released this weekend are pointing to what could be the most powerful El Niño event in recorded history - raising the possibility of a rare "super" episode developing later this year. Multiple long-range models are now trending warmer, with some pushing into territory rarely seen in modern records - a signal that has caught scientists' attention. Time will tell how it affects us here. As a weather related club, this is definitely something to keep an eye on and a helping hand ready.

73,
Elizabeth, KE8FMJ
